11 December 1973

25X1

MEMORANDUM FOR:

THROUGH : Acting Chief, D/I

SUBJECT : Japanese Defense Expenditures

25X1

The attached material is in response to your request

for information on Japanese defense expenditures. Overall military spending in Japan has increased sharply in recent years and present plans call for considerably more spending during the current 5-year defense plan which extends through early 1976. Japan, however, still spends less than 1% of GNP on the military and the share is not expected to rise at least over the next several years.

JAPANESE DEFENSE EXPENDITURES

1. Japanese military spending, administered under Five-Year Defense Plans, has increased sharply since the late 1960s. During the fiscal year ending in March 1974 total defense outlays are expected to reach \$3.4 billion, compared with \$1.3 billion for the year ending in March 1970. Despite the sharp increase, some of which can be attributed to yen revaluation, military spending still amounts to less than 1% of gross national product and about 5% of total government outlays. Planned military spending during the entire Five-Year program that ends in March 1976 is expected to reach \$20.0 billion (See Table 1).
2. Approximately 90% of the total defense budget is allocated to the three Japanese military services; the Ground Self Defense Force (Army), the Maritime Self Defense Force (Navy) and Air Self Defense Force (Air Force). The Army receives about half the total, with the balance shared almost equally by the Navy and Air Force. Personnel costs account for about 50% of overall outlays and new equipment procurement another 25% (See Table 2).
3. Japan's permanent uniformed military force now includes nearly 235,000 people. Almost 90% of the equipment

~~CONFIDENTIAL~~

utilized by this force is produced domestically. Of this, about half, on a value basis, is produced under foreign license or imported in component form. Total foreign purchases of military equipment range between \$100 million and \$200 million annually, practically all of which is procured from the United States. Tokyo plans to increase its inventory of domestically designed and developed equipment, particularly aircraft. The greater cost of domestic designs combined with the military's meager allocations for research and development, however, will make it extremely difficult for Japan to reduce significantly its dependence on foreign suppliers of sophisticated equipment and weapons technology.
